

Challenges

Stakeholder engagement

Who should be involved in decision-making?

How do I engage my stakeholders to make the necessary decisions?

How do we agree priorities across the organisation?

How do I promote collaboration between IT and compliance?

Rapid development of technology to manage and mitigate risk

What can Microsoft Purview do and what is available within our current licence?

Will the technology support our specific regional/industry regulations?

How much can we tailor the technology?

Do the costs justify the benefits?

Regulatory requirements are rapidly changing, will the technology keep up?

Translating business requirements and regulation into technology controls

How far should we standardise requirements across the business?

How do we ensure controls are translated to adequately meet our risks?

How do we explain the implications of policies and decisions on users and user behaviour?

Leading adoption of powerful features with confidence

How could we phase the work whilst minimising exposure to risk?

Does our internal team have the skills to deploy and maintain this functionality?

How do we build this into our strategic plan for content?

How does this work fit in with other projects (like a legacy content migration project or an upcoming acquisition)?

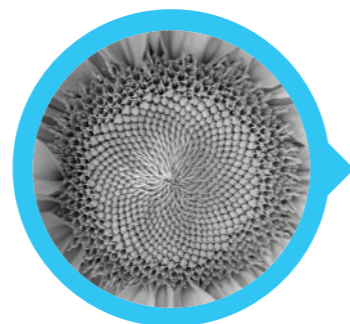

Compliance is a journey, not a destination

Trusted advisors and experienced guides to help you mature your compliance position using Microsoft Purview

Compliance Catalyst Workshop and Microsoft 365 Compliance Assessment are the launching points for our engagements.

Compliance Accelerator Programme is a subscription programme giving you access to our unique combination of compliance, business and technical skills. Services could include advisory, technical design and deployment, assisted trials, managed services and support.

Designed to deliver:

- Proactive risk mitigation
- Value from Microsoft investment
- Aligned stakeholders
- Well informed decision-making
- Sustainable progress

The Cloud Essentials difference

We're about more than just technology

We firmly believe that the best solutions are just as much about people and processes as they are about technology, never more so than in the compliance/risk arena. We will always take your unique organisational context into account and ensure we leave you with the knowledge, skills and understanding that underpin a sustainable compliance strategy.

A unique combination of skills

We're tech experts with in-depth knowledge of the inner workings of Microsoft Purview and fingers on the pulse when it comes to new developments and solutions. We're also legal/compliance experts, well-versed in the nitty gritty of legislative and regulatory data governance requirements. And we're passionate about content and helping our clients to reconcile business needs and productivity with data governance and security, for maximum impact and minimum risk. Uniquely, we speak the languages of IT, innovation, digital transformation, governance, risk AND compliance to help accelerate initiatives and deliver business benefits for everyone.

We're in it for the long haul

There's nothing we love more than an active, long-term partnership during which we can help develop and evolve your compliance strategy. Whether it's the start of your journey, you're maturing your existing position, tapping into newly released functionality, or preparing for exciting developments or business changes down the pipeline, we can help you squeeze every ounce of value from this ever-evolving technology.

Microsoft is in our DNA

We've been working on Microsoft technology since the very early days of cloud computing. Our primary goal is always to ensure you're getting the best possible value from Microsoft's rapidly evolving platform.
